Eric,

I am forwarding you this e-mail that was sent to George Richert this afternoon.

Apparently Mr. Telvock has been on Holy Trinity property and has used a gamma meter to measure radiation

levels in the Cemetery. We are in no position to dispute what he is saying. I know you have spent countless hours on Holy Trinity

Cemetery property conducting your own readings and have mapped and fenced off radioactive areas. We have relied on your expertise in this matter. What do you make of his "findings"

and statement? At some point we will need to respond to his question. Please provide us with your opinion on this.

Thank you.

Carmen

Hi George,

The paved road that leads through portions of the cemetery at Holy Trinity is hot and the grass next to portions of this road are hot--up to 20 times above radioactive background levels. This section is not fenced off and in fact, people drive it and walk it regularly.

Did the Diocese know this?

Dan,

I have discussed your request for an interview with the folks involved, and we would prefer to simply let this statement (below & attached) speak for the Cemetery and the Diocese.

Thank You,

George Richert

Statement on Holy Trinity Cemetery

Care for creation is an important part of our Catholic teaching, thus, we are monitoring the situation at Holy Trinity Cemetery very closely. We have fully cooperated with the Environmental Protection Agency, allowing them total access to the section of the cemetery where they are conducting their testing. There are no burials in that section.

We expect the EPA to make sure the site is properly remediated. It is up to the EPA to communicate with the public regarding this situation and any future remediation at the site.

For more information, contact George Richert at 208 6913.
